Abb. 1-1: Richard Löwenherz' Schield

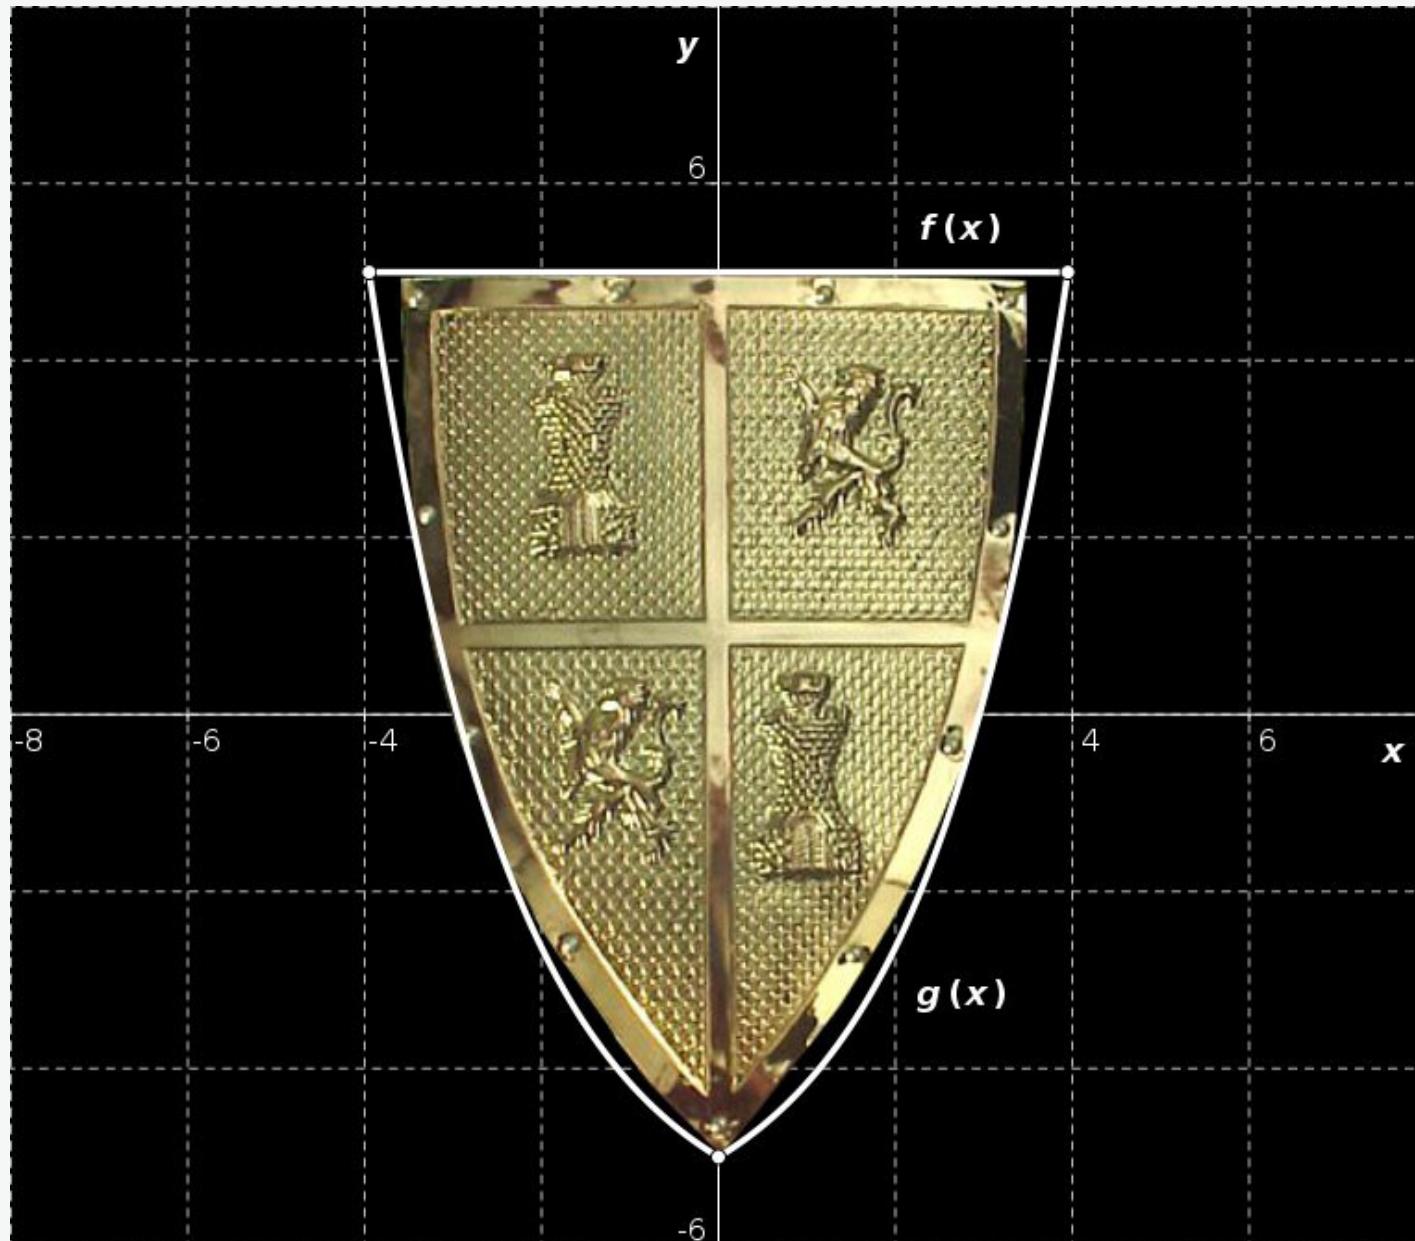

Abb. 1-2: Ein Detail des Schieldes von Richard Löwenherz

Eine Fläche: Beispiel 1

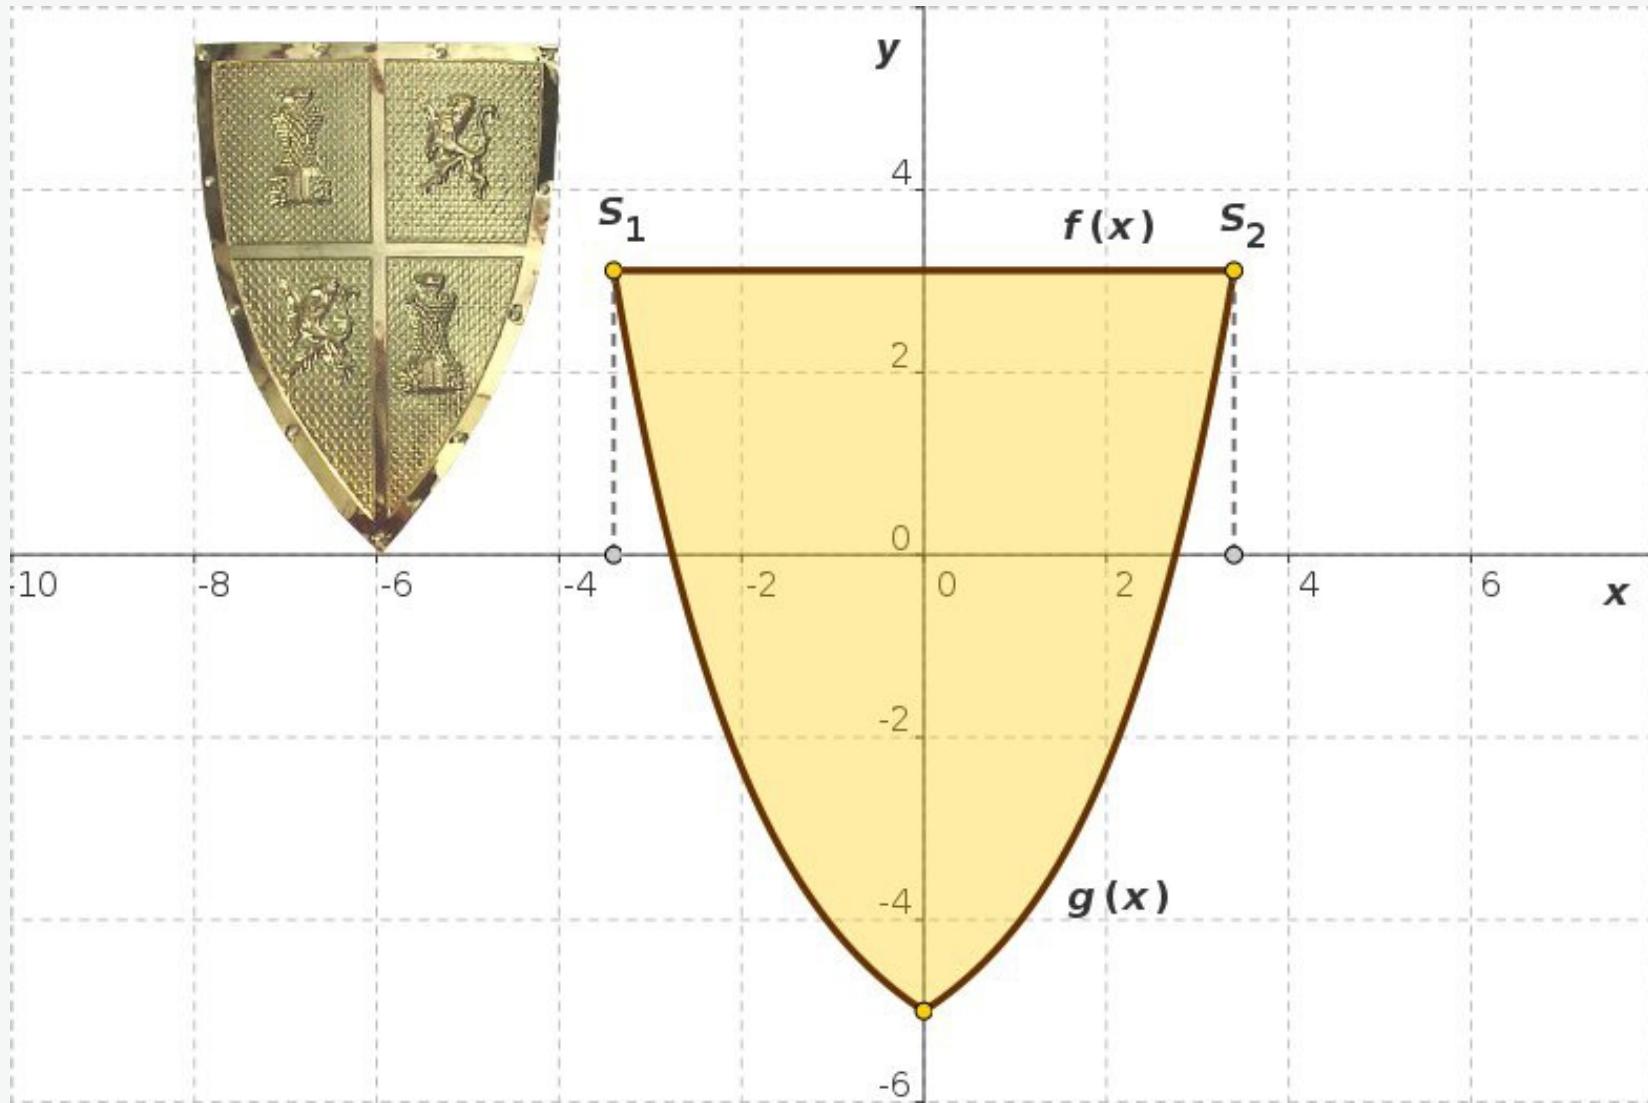

Abb. 2-1: Fläche, die zwischen den Funktionen $y = f(x)$ und $y = g(x)$ eingeschlossen ist

$$f(x) = 3.12, \quad g(x) = e^{0.65|x|} - 6$$

Eine Fläche: Beispiel 1

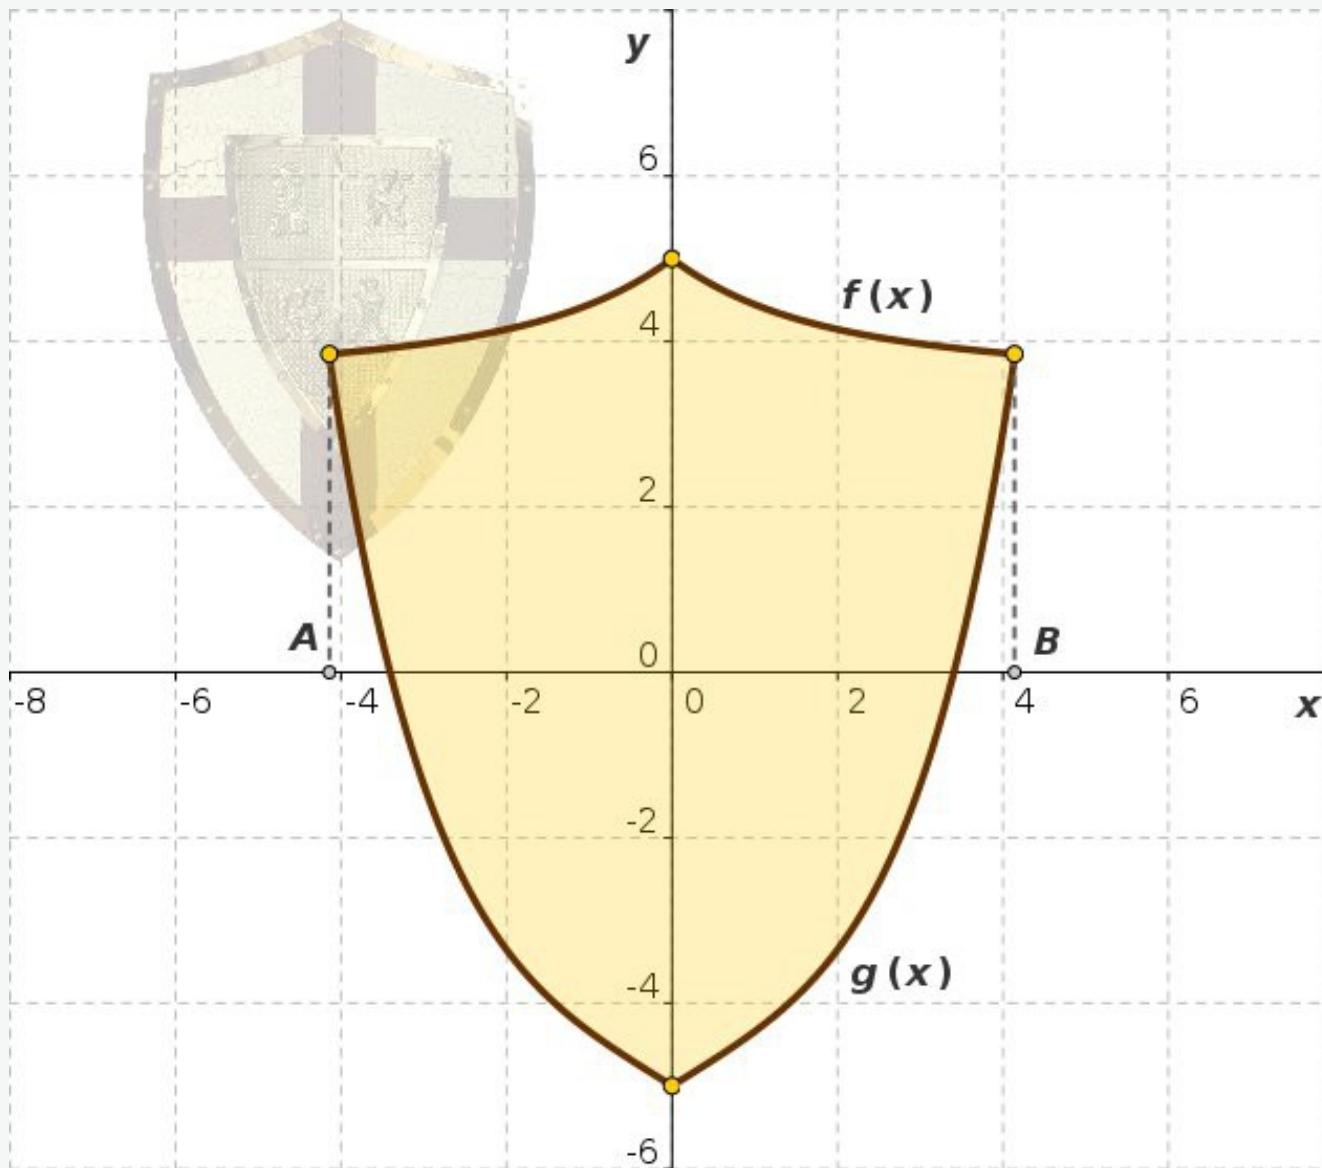

$$f(x) = a, \quad g(x) = e^{b|x|} - 6, \quad a = 3.12, \quad b = 0.65$$

$$S_1 = (-c, a), \quad S_2 = (c, a), \quad c = \frac{1}{b} \ln(6 + a)$$

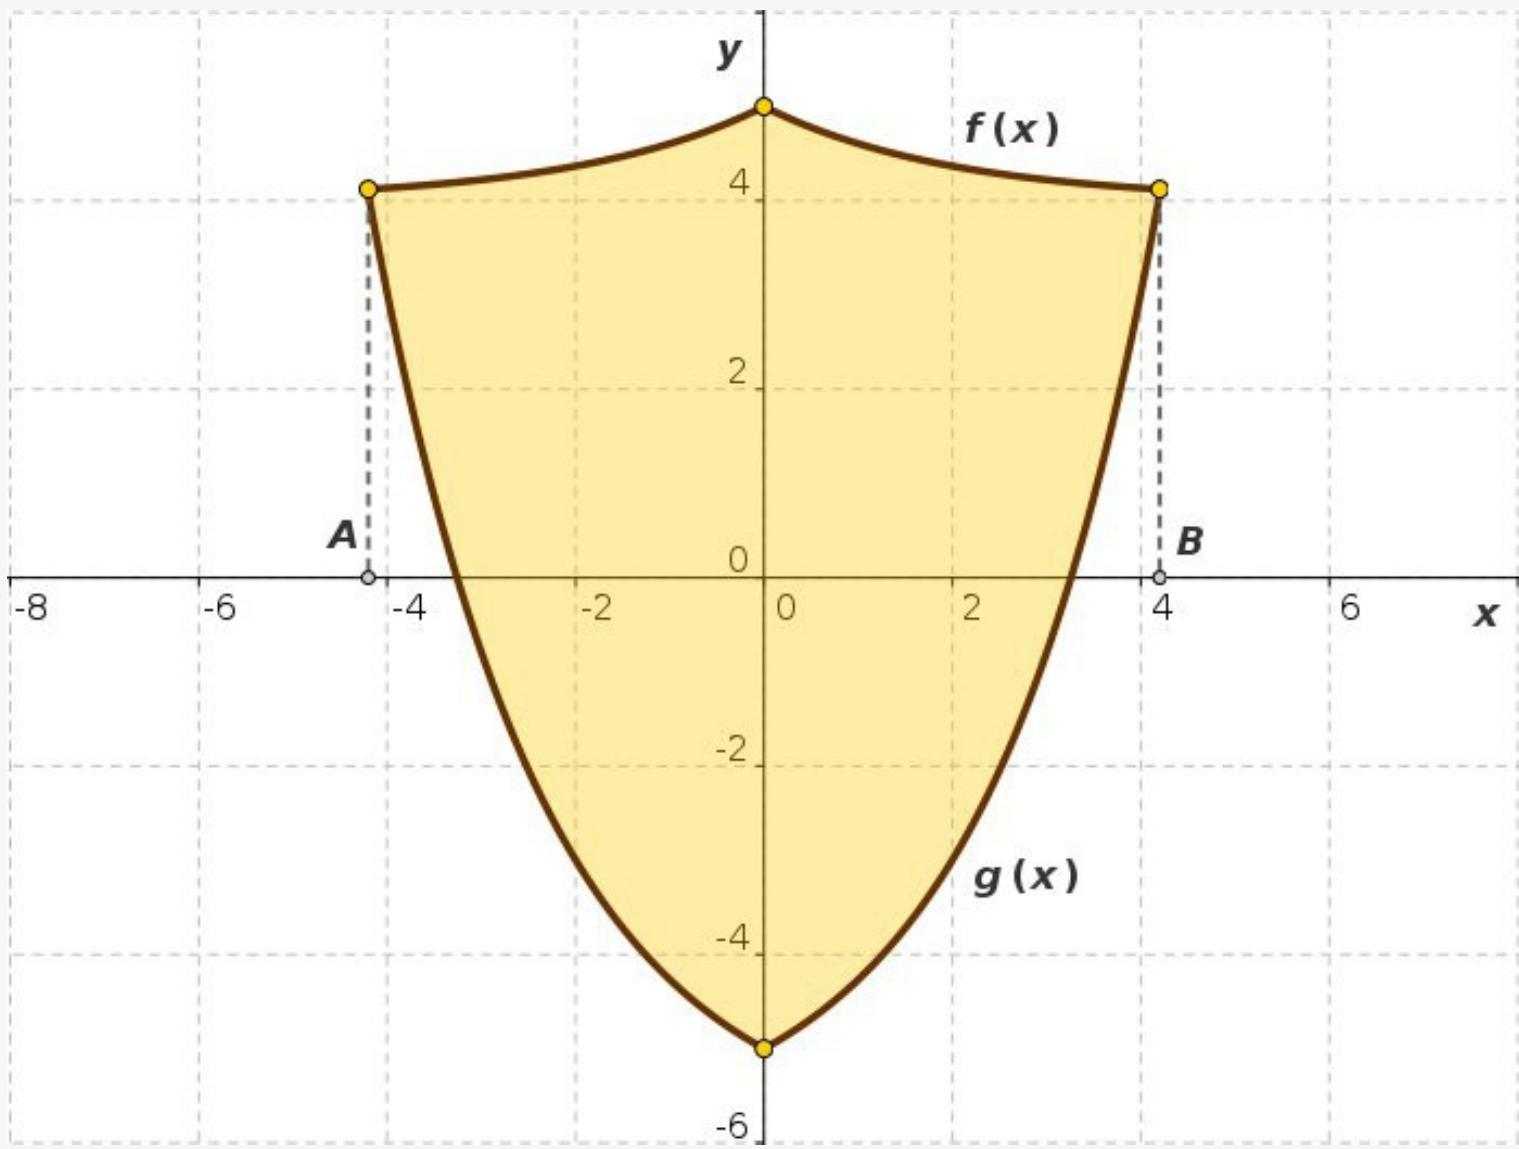

$$\begin{aligned} A &= \int_{x=-c}^c \int_{y=g(x)}^{f(x)} dy dx = 2 \int_{x=0}^c \int_{y=g(x)}^{f(x)} dy dx = \\ &= 2 \int_{x=0}^c \int_{y=e^{bx}-6}^a dy dx = 2 \int_{x=0}^c (a - e^{bx} + 6) dx = \end{aligned}$$

$$= \frac{2}{b} [(6 + a) \ln(6 + a) - 5 - a] \text{ FE}$$

$$A = 2 \int_{x=0}^{\frac{\ln(9.12)}{0.65}} \int_{y=e^{0.65x}-6}^{3.12} dy dx = 21.16 \text{ (FE)}$$

$$f(x) = 4 + e^{-0.7|x|} - 0.05|x|, \quad g(x) = e^{0.63|x|} - 6 - 0.22x^2$$

$$f(x) = 4 + e^{-\frac{|x|}{2}}, \quad g(x) = e^{\frac{|x|}{2}} - 6$$

$$f(x) = 4 + e^{-\frac{|x|}{2}}, \quad g(x) = e^{\frac{|x|}{2}} - 6$$

$$A = (-a, b), \quad B = (a, b)$$

$$\begin{aligned} A &= \int_{x=-a}^a \int_{y=g(x)}^{f(x)} dy dx = 2 \int_{x=0}^a \int_{y=g(x)}^{f(x)} dy dx = \\ &= 2 \int_{x=0}^a \int_{y=e^{\frac{x}{2}}-6}^{4+e^{-\frac{x}{2}}} dy dx = 2 \int_{x=0}^a \left(10 + e^{-\frac{x}{2}} - e^{\frac{x}{2}} \right) dx = \\ &= 4 \left[5x - e^{-\frac{x}{2}} - e^{\frac{x}{2}} \right]_0^a = \\ &= 4 \left(2 + 5a - e^{-\frac{a}{2}} - e^{\frac{a}{2}} \right) \text{ (FE)} \end{aligned}$$
