*A mathematics course preparing for the regular mathematics lectures
at University of Applied Sciences*

(see <http://math-grain.de/>)

by

Lubov Vassilevskaya, Lubov.Vassilevskaya@et.hs-fulda.de

and Jörg Gayler, Joerg.Gayler@desy.de

We provide material to prepare students, having different mathematical background, for the regular mathematics courses at HAW Hamburg. The goal is that the forthcoming regular lectures are well understood. We also provide many exercises. Some of them should be attacked at once during the course to check understanding, others are available for later training.

The programs GeoGebra and Maple were used to prepare this course.
